Education

Santa Clara University <i>Master of Computer Science and Engineering</i>	Santa Clara, CA, USA September 2024 – June 2026 (anticipated)
Maharaja Sayajirao University of Baroda <i>Post Graduate Diploma in Computer Application</i>	Gujarat, India September 2022 – May 2023
Maharaja Sayajirao University of Baroda <i>Bachelor of Computer Application</i>	Gujarat, India July 2019 – May 2022

Skills

Languages/Frameworks: Python, Java, C, C++, SQL, TypeScript, JavaScript, Angular, Next.js, Node.js, HTML, CSS
Databases & Cloud: MongoDB, Oracle, Couchbase, AWS (S3), Kubernetes (K8s)
Tools & Development: Git, GitHub (Version Control), Jira, Figma, GraphQL/REST APIs, Responsive Web Development, CI/CD, Agile, SDLC, Test-Driven Development, front-end development, Data Structures & Algorithms
AI/ML & Data: scikit-learn, SentenceTransformers, Pandas, NumPy, Regex, RapidFuzz, Streamlit, Data Visualization

Work Experience

AI/ML Intern (Software Developer) SNAP Life Sciences	July 2025 – December 2025
- Spearheaded microservices-based APIs with Node.js and Spring Boot, integrating Couchbase authentication and role-based access control to achieve 99.99% authentication success and strengthen data security. - Pioneered machine learning models in Python to predict drug net pricing, applying feature engineering and data preprocessing to enhance model scalability and reliability. - Built and containerized React and Streamlit dashboards with Docker for end-to-end deployment, improving cross-functional collaboration between data science and engineering teams.	
Fullstack Engineer Minimal Dot	May 2023 – June 2024
- Designed and developed a real-time project management tool using Angular, TypeScript, and RESTful APIs, implementing custom sunburst and Kanban charts for data visualization and improved task visibility across cross-functional teams. - Implemented secure document storage with AWS S3, enabling version-controlled uploads and seamless integration with web services for file access and collaboration. - Improved deployment success rates by 25% through unit and integration testing, CI/CD automation, and consistent adherence to the software development lifecycle (SDLC).	

Projects

Expense Tracker
- Built a full-stack expense management system using Java and MySQL to handle user authentication, group management, and real-time expense tracking. - Designed and implemented RESTful APIs for personal and group expenses with support for equal, percentage, and exact split methods. - Improved code scalability and performance by modularizing core logic for transactions, analytics, and real-time balance updates, enhancing overall maintainability.
My Schedules
- Built a shift management system using Angular, Django, and PostgreSQL, designing advanced relational database models to handle complex scheduling workflows for over 100 users while maintaining data integrity. - Automated shift swaps, releases, and approvals using Angular and Django REST APIs with PostgreSQL triggers and stored procedures, reducing scheduling conflicts by 30%. - Integrated calendar view and notification systems with a database-backed event-driven architecture, improving shift tracking efficiency for over 100 users.
Billing and Inventory Management System
- Engineered a full-stack billing and inventory management system using C# and MySQL to streamline stock control, billing, and inventory tracking for around 100 products and 20 daily transactions. - Delivered core functionalities including product/category CRUD, tax calculations, billing reports, and advanced search/filter features, reducing manual data handling time by 15%. - Integrated secure user authentication with role-based access control, supporting 5–10 concurrent users while maintaining efficient backend performance and a seamless UI experience.
